

Sharepoint Customization Questions

One of my pet peeves with Front Page was that it didn't handle dynamic Share point links. When you needed it to place a variable into the URL, it would change the hyperlink to an email address.

-
I am of course assuming that you want the email link in the middle of a web-part. Well, this answer will work in a web part or not.

-
Unfortunately, when SP Designer came in, I thought, "oh, all the good that is Front Page minus what is bad", oh was I wrong. Sure, it has new features, but c'mon, lets get the bugs out first ok?

-
Anyway, onward:

-
Open the document you want to contain the email link in SP Designer.

Right-Click the web-part that contains the text you want to link, and click 'convert to XSLT Data View'

Select the link text (text you want to insert the email link).

Right-click, select 'hyperlink'

type XXX as the address.

Click OK.

Click 'Code View' (lower left corner of the screen).

Move to the top of the document ([CTRL]+[HOME])

Search for 'xxx'

You will see code like this:

<xsl:value-of disable-output-escaping="no" select="@ProjectType"/>

Change 'xxx' to whatever you want, such as:

-
Save your document.

Customizing Portal Solutions with Microsoft SharePoint Technologies (Including Microsoft Content Management). I would like for someone to tell me if I stand a chance. Is it a hard exam? Do I have to be an experienced coder to pass it? I only understand html. Or does it deal mainly in concepts and understanding of the different Microsoft products?

Answer :: usually these exams doesnt not require indepth programming knowledge.

but concepts and understanding must be deep

if you are an experienced person, you dont need much preparation and then again you dont need the certification.

to help - there must be a book available on the net or bookstore - reading it will usually help you pass [Read More](#)
